No. is the number of results predicted by chance to have score greater than or equal to the score of the result being pu and is derived by analysis of the total score distribution.

RESULT 1
AAP71145
Pure basic fibroblast growth factor - produced by inserting synthesised DNA chain into cloning vector and producing transformed cell lines.
                                                                                                                                                                                                             11-MAR-1991

      The peptide is a bovine basic fibroblast growth factor. Truncated analogues of this peptide (esp. comprising residues 24-68) can be used as bFGF antagonists, and can therefore interact or inhibit the FGF receptor and modulate endothelial and other cell growth. The peptide analogues can be used in human and veterinary medicine for diagnosing and treating vasoproliferative diseases of the eye (e.g. diabetic retinopathies), kidney (e.g. glomerulonephritis), tumours (e.g. chondrosarcoma), adrenal vascularisation and to inhibit

This substantially pure protein was purified from partially purified basic fibroblast growth factor (FGF) by cation exchange HPLC and two reverse-phase HPLC steps. Having purified this protein to apparent homogeneity the amino acid sequence can be determined and pure basic FGF may be synthesised using recombinant DNA techniques (see also AAQ29741). This peptide is biologically active and exhibits either or random disulphide bonding within the molecule. This protein, an analogue, a biologically active fragment, or a non-toxic salt of it may be used in a pharmaceutical composition for diagnostic or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
This invention describes a novel unit dose (I), of fibroblast growth factor (FGF) comprising 0.008-6.1 mg of a mammalian FGF comprising sequence of 140 ((II) and (III)), 146 ((IV) and (V)), 205 (VI), 266 (VII), 207 ((VIII) and (XII)), 215 (IX), and 208 (X) anino acids (aa), given in the specification, its angiogenically active fragment or mutein. The product of the invention has angiogenic and cardiant activity. (I) is used for treating a human patient for coronary artery disease, and inducing angiogenesis in the human heart. (I) further provides an adjunct for reducing post myocardial infarction injury in humans. The unit dose provides the human patient with a rapid and therapeutic cardiac angiogenesis sufficient to obviate surgical intervention and results in an superior increase in the treated patients's exercise tolerance time (ETT). It also provides a safe and
                                                                                                                                                                                                                                                                                Novel unit dose comprising fibroblast growth factor, its angiogenically active fragment or mutein for inducing cardiac angiogenesis, treating coronary artery disease and reducing post myocardial infarction injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FGF-2; fibroblast growth coronary artery disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY87848 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapeutically efficacious treatment for the patients with coronary artery disease that lasts at least 6 months before a further treatment is needed. The method provides superior increase of 1.5-2 minutes in the treated patient's (ETT), compared to an increase of 30 seconds for current modes treatment. This sequence represents the bovine FGF-2 protein fragment described in the method of the invention.
                                                               (FGF-2) sequence. The invention relates to a unit dose composition (I) for inducing angiogenesis in a human, comprising 0.008-7.2 mg of FGF-2 or an angiogenically active fragment or mutein of FGF-2. The composition (I) and recombinant FGF-2 are useful for treating coronary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          XX
                        The invention relates to pharmaceutical composition comprising stabilised fibroblast growth factor (RGF) or its variant. Methods for increasing storage stability of FGF or its variant in a liquid or lyophilised composition is also provided. The method is useful for increasing storage stability of a pharmaceutical composition comprising FGF or its variant which becomes oxidised during storage. The pharmaceutical composition is useful for promoting tissue regeneration, treating wounds, ischaemic heart diseases, stroke and is used for bone fracture healing. The present sequence is bovine FGF-2 partial protein.
                                                                                                                                                                                             Stabilized pharmaceutical composition comprising fibroblast growth factor or its variant, and reducing agent to inhibit oxidation of fibroblast growth factor, useful for promoting wound healing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bovine; peripheral artery disease; PAD; fibroblast growth factor-2; FGF-2; peak walking time; ankle branchial index; body pain; stair climbing ability; claudication; critical limb ischaemia; stroke; cardiovascular disorder; diabetes; dyslipidaemia; hypertension.
                              peak walking time with intermittent claudication, improving ankle branchial index with intermittent claudication, reducing body pain, improving stair climbing ability and reducing the severity of the claudication. FGF-2 is also useful for treating or preventing peripheral artery disease (PAD) including claudication and critical limb ischaemia, and even those suffering from a wide spectrum of related clinical ailments including coronary artery disease (CAD), myocardial infarctions, stroke, diabetes, dyslipidaemias, hypertension and patients who have had surgical or catheter-based revascularisations. The present
                                                                                                                                                                             The present invention relates to compositions and methods for treating peripheral artery disease. The method comprises administering fibroblast growth factor-2 (FGF-2) to a patient in two doses, where a single dose is administered into each leg of the patient within a one hour period. FGF-2 is useful for treating peripheral artery disease, improving
                                                                                                                                                                                                                                                                                                                 Treating peripheral artery disease, for improving peak walking time and ankle branchial index with intermittent claudication in a patient, comprises administering fibroblast growth factor in two doses at one hour interval
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-APR-2002

The published AA sequence of bovine basic FGF was used as a basis for the synthesis of mfd. bFGF gene for expression in E. coli. The nucleotide sequence of this mfd. gene includes codons most often used by E. coli and the inclusion of convenient restriction sites. Oligonucleotides corresp. to both strands of the gene were synthesized in overlapping sections and assembled into 2 larger sections by hybridation and subsequent ligation. The 2 larger sections were then cloned into an approp. phage vector [M13mp18] for uncleotide sequence analysis. The sections were then ligated into an expression vector and introduced into E. coli. Bovine and human basic FGF are known to differ by only two AAs. Site directed mutagenesis was used to convert the bovine gene into one coding for the

Example; Fig 2; 21pp; English.

```
The N-terminal AA sequence of both acidic and basic bovine FGF are used to construct long probes to screen human and bovine genomic libraries for FGF genes. Isolated sequences are used in vector construction etc. and used to transform CV-1 cells for FGF prodn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA sequences encoding mammalian fibroblast growth factors useful in prodn. of pure factors for use in wound healing and tissue repair and of probe for tumour testing

                                                                                                                                                                                                                                    AAW20029 is a recombinant bovine basic fibroblast growth factor (bFGF). Recombinant bFGF is used to promote healing of wounds, bone fractures, damaged myocardial tissue etc. and, since it increases neuronal survival and promotes neurite outgrowth, may also be used in treatment of neurological disorders such as Alzheimer's and Parkinson's diseases. BFGF may also be used for detection of specific inhibitors; for treatment of cell cultures in vitro before transplant and for inducing release of tissue plasminogen activator or collagenase, e.g. for treatment of a chronic tendency to form embolism. Recombinant bFGF can be produced on a large scale.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant bovine basic fibroblast growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-SEP-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW20029;

                                                                                                                                    Matches
                                                                                                                                                                                                                   The invention relates to pharmaceutical composition comprising stabilised fibroblast growth factor (FGF) or its variant. Methods for increasing storage stability of FGF or its variant in a liquid or lyophilised composition is also provided. The method is useful for increasing storage stability of a pharmaceutical composition comprising FGF or its variant which becomes oxidised during storage. The pharmaceutical composition is useful for promoting tissue regeneration, treating wounds, ischaemic heart diseases, stroke and is used for bone fracture healing. The present

                      growth factor-2 (FGF-2) to a patient in two doses, where a single dose is administered into each leg of the patient within a one hour period. FGF-2 is useful for treating peripheral artery disease, improving peak walking time with intermittent claudication, improving ankle branchial index with intermittent claudication, improving ankle improving stair climbing ability and reducing the severity of the claudication. FGF-2 is also useful for treating or preventing peripheral artery disease (PAD) including claudication and critical limb ischaemia, and even those suffering from a wide spectrum of related clinical aiments including coronary artery disease (CAD), myocardial infarctions, stroke, diabetes, dyslipidaemias, hypertension and patients who have had surgical or catheter-based revascularisations. The present sequence represents bovine 155 amino acid FGF-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FGF-2; peak walking time; ankle brancl

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score

idic fibroblast growth factor - chicken
Alternate names: endothelial cell growth factor
.Species: Gallus gallus (chicken)
.Date: 03-Mar-1993 #sequence_revision 03-Mar-1993
.Accession: A60130; S02639
```
